

Built for the moment before clarity.

AI-powered productivity • Shared accountability • Built for real life

Ginja helps people move from mental clutter to clear action, then stay aligned with it.
This is not another to-do app. It is an initiation and follow-through system.

ginja.io · April 2026

The Problem

Most people do not struggle to execute.

They struggle to begin.

The real problem is not discipline.

It is the moment before clarity.

The Hidden Problem

Life is messy before it is organized.

Plans live in chats, memory, and emotional pressure.

Most tools assume a system of record already exists.

Real life has no system of record.

Comparison: Why Ginja Is Different

Other tools organize work. Ginja helps people start and actually follow through.

Tool	Best at	Where it breaks	What Ginja adds
Notion	Documentation and custom systems	Setup overhead before action	Clarity before structure
Structured	Daily planning and routine framing	Assumes the to-dos are already clear	Brain Dump into structured to-dos
Asana / Todoist	Tracking defined work	Built for execution after planning	Guidance in the messy moment before planning
Ginja	Turning chaos into action and follow-through	Reduces friction instead of adding more	Brain Dump, Calendar, Circle, Smart Nudges

The Core Insight

**Most tools are built for people who already have clarity.
We built Ginja for the moment before that.**

— Ginja Product Principle

The Solution

One system. From chaos to clarity and shared accountability.

Ginja = individual clarity + social accountability

BRAIN DUMP

Core Feature

Brain Dump

Capture what is on your mind before structure gets in the way.

- Speak or type raw thoughts without formatting them first
- AI converts messy input into structured, prioritized to-dos
- This is the most-used entry point in the product
- It turns overthinking into momentum

Most to-do creation begins here.

TO-DO CALENDAR

Core Feature

To-Do Calendar

A single view to plan, prioritize, and follow through.

- See upcoming, done, and overdue to-dos in one timeline
- Schedule directly from Brain Dump without switching tools
- Balance work, health, and personal commitments in context
- Keep momentum visible with less decision friction

CIRCLE

Collaboration

Circle

Shared plans for real life without corporate workflow overhead.

- **Coordinate trips, households, and group plans in one calm space**
- **Assign ownership clearly without losing context in chat**
- **Create accountability that feels supportive, not heavy**
- **Circle turns individual planning into shared follow-through**

Users naturally invite others into the product.

SUGGESTED FOR YOU

Personalized, Not Generic

Suggested for You

A dynamic layer that recommends what to focus on next.

- Suggests to-dos based on recent activity
- Adapts to mood, energy, and daily rhythm
- Highlights what matters now, not just what exists
- Reduces decision fatigue with calmer direction

This is not just productivity. It is personal.

SMART NUDGES

AI Layer

Smart Nudges

The right reminder at the right moment.

- **Uses behavior signals to time prompts more intelligently**
- **Connects nudges to calendar context instead of generic reminders**
- **Designed for fewer interruptions, not more noise**
- **Adds a wellness layer through mood and wind-down loops**

Market Opportunity

A large market with a weak consumer entry point.

\$102B+

Global productivity software
market by 2027

4B+

Smartphone users globally

Open gap

Personal-life coordination still
has no category leader

Ginja's wedge: AI-assisted initiation plus social accountability for real life.

That is a different starting point from work software and generic planners.

Early Signal, Not Just Early Users

700+ users. Zero paid marketing.

What stands out is behavior:

- Brain Dump drives most to-do creation
- Users return multiple times daily
- Circle expands usage naturally
- Actions are created with low friction

This is not passive usage.

This is habit formation beginning to emerge.

Most-used

Brain Dump feature

Multi-daily

Return behavior

Built-in

Social expansion via Circle

Product Advantage

Built around behavior change, not feature overload.

- Brain Dump converts overload into clear to-dos
- Calendar keeps priorities visible in context
- Circle adds shared accountability for real life
- Smart Nudges adapt by timing and behavior
- Calm UX lowers friction and decision fatigue
- The system improves with every interaction

Defensibility comes from AI signals, timing, and social accountability working together.

That is a system-level advantage, not just another feature list.

Vision & Roadmap

The category is just beginning.

Now

- Brain Dump
- Circle
- Smart Nudges
- Strides
- Wellness check-ins

Next

- Brain Dump history
- Weekly Wrap summaries
- Circle challenges
- Ginja Guard focus mode
- Android expansion

Later (Premium)

- Predictive To-Dos
- Adaptive Flow
- Deeper personalization loops
- Advanced insights
- Expanded collaboration

Product Direction

From capture to consistent execution.

Ginja is building the operating layer for personal productivity.

The roadmap focuses on clarity, accountability, and adaptive intelligence.

Near term: strengthen Brain Dump, Calendar, Circle, and Smart Nudges into one daily workflow.

Long term: become the default behavior-aware productivity system for real life.

The Insight

Most tools are built for clarity.

Real life starts before that.

People do not need better organization.

They need help getting from chaos to action.

A Simple Flow

Capture → Brain Dump

Clarify → Structured to-dos

Execute → Calendar + Nudges

Align → Circle

One system. From thought to follow-through.

Growth Through Real Life

A user creates a plan.

Invites others into Circle.

They collaborate and assign actions.

Each user creates new plans.

Every user becomes a growth channel.

From Tool to System

Ginja learns how you behave.

- What you delay
- What you prioritize
- When you act

This enables Predictive To-Dos, Adaptive Flow, and Smarter Nudges.

Monetization Follows Value

Free: core productivity and collaboration.

Premium:

- **Adaptive Flow**
- **Predictive To-Dos**
- **Advanced insights**
- **Expanded Circle**

Users upgrade when the system becomes essential.

Why This Space Is Still Open

Execution tools exist.

Initiation systems do not.

**Ginja connects AI understanding, behavior timing,
and social accountability.**

This is a system advantage.

Where This Goes

From managing to-dos ☐ to guiding behavior.

From reminders ☐ to intelligent execution.

From solo productivity ☐ to shared accountability.

Building With the Right Partners

We are early — intentionally.

The behavior signal is real.

Looking for:

- **Strategic partners**
- **Product and growth insight**
- **Long-term alignment**
